METODI E CARATTERISTICHE TECNICHE DI UN GRES PORCELLANATO
CLASSIFICAZIONE DEL PRODOTTO UNI EN 14411 Gruppo Bla appendice G “Piastrelle con assorbimento d’acqua ≤ 0,5% GL completamente greificato”
METHODS AND TECHNICAL FEATURES OF PORCELAIN STONEWARE
PRODUCT CLASSIFICATION UNI EN 14411 Group Bla appendix G “Tiles with water absorption ≤ 0.5% GL completely vitrified

METODI E CARATTERISTICHE TECNICHE DI UNA BICOTTURA ATOMIZZATA
CLASSIFICAZIONE DEL PRODOTTO UNI EN 14411-L BIII “Piastrelle con assorbimento d’acqua > 10%”
METHODS AND TECHNICAL CHARACTERISTICS OF ATOMIZED DOUBLE FIRED TILES
PRODUCTS CLASSIFICATION UNI EN 14411-L BIII "Tiles with water absorption > 10%"

	Pavimento Floor tiles		Rivestimento Wall tiles		Bicottura atomizzata Atomized double-fired		Tecnologia digitale. Digital technology.
	Pavimento lucido Glossy flooring		Rivestimento lucido Glossy wall tiling		Resistenza al gelo Frost proof		Numero grafiche differenti Number of different patterns
	Pavimento semimatt Semimatt flooring		Rivestimento semimatt Semimatt wall tiling		Resistenza all’abrasione Wear resistance		CHINA COMPULSORY CERTIFICATION è la certificazione necessaria per le esportazioni in Cina CHINA COMPULSORY CERTIFICATION is the certification required to export to China
	Pavimento matt Matt flooring		Rivestimento matt Matt wall tiling		Resistenza all’abrasione profonda Deep abrasion resistance		

	Resistenza allo scivolamento Slip resistance NORMATIVA TEDESCA DIN 51130 GERMAN REGULATIONS DIN 51130
DIN 51130 Norma per il transito con calzature In funziona dell’ambiente e zona di lavoro DIN 51130 Norm related to the transit with footwear according to the environment and working area	
	R9 Ingresso e scale con accesso dall'esterno. Ristoranti, mense, negozi, ospedali, scuole. Entrances and staircases with outdoor access. Restaurants, canteens, shops, hospitals, schools.
	R10 Bagni e docce, cucine residenziali e garage. Bathrooms and showers, residential kitchens and garages.
	R11 Aree per produzione di generi alimentari, cucine per la ristorazione, ambienti con presenza di acqua. Food production facilities, medium-sized restaurant kitchens. Working environments with water.
	R12 Aree per la produzione di alimenti ricchi di grassi, grandi cucine industriali, parcheggi auto. Environments for the production of high-fat foods, large restaurant kitchens, parking areas.

Questa prova prevede che, in un dispositivo, la persona cammina con una calzatura con una suola standard, sopra un piano inclinato con un angolo variabile. La superficie, ricoperta con le piastrelle sottomesse alla prova, è continuamente impregnata con un agente lubrificante. L'angolo del piano inclinato che permette l'equilibrio della persona con sicurezza, senza scivolare, rappresenta la misura della prova.
This test is based on a person that walks with shoes with a standard sole on top of an inclined plane with a variable angle. The surface, covered with tiles submitted to the test, is continuously lubricated. The angle of the inclined plane that allows the balance of the person without slipping, it's the size of the test.

	Coefficiente di attrito medio Coefficient of medium friction B.C.R.A. BRITISH CERAMIC RESEARCH ASSOCIATION - > 40 Normativa antiscivolo richiesta dalla legge italiana B.C.R.A. BRITISH CERAMIC RESEARCH ASSOCIATION - > 40 Anti-slip legislation required from the Italian law
METODO BCRA	
Il metodo BCRA è una rilevazione strumentale che fornisce la misura dell'attrito dinamico (μ) a cui una superficie deve rispondere per essere considerata antidrucciolevole (μ deve essere ≥ 0,40 sia per l'elemento scivolante cuoio su pavimentazione asciutta che per l'elemento scivolante gomma dura standard su pavimentazione bagnata): The BCRA method measures the coefficient of dynamic friction (μ) that a surface must meet in order to be classified as anti-slip (μ must be ≥ 0.40 both for the slipping element made of leather on dry surfaces and for slipping elements made of hard rubber on wet surfaces):	
COEFFICIENTE DI ATTRITO DINAMICO COEFFICIENT OF DYNAMIC FRICTION	
μ ≤ 0,19	SCIVOLOSITÀ PERICOLOSA DANGEROUS SLIPPERINESS
0,20 ≤ μ ≤ 0,39	SCIVOLOSITÀ ECCESSIVA EXCESS SLIPPERINESS
0,40 ≤ μ ≤ 0,74	ATTRITO SODDISFACENTE SATISFACTORY FRICTION
μ ≥ 0,75	ATTRITO ECCELLENTE EXCELLENT FRICTION

Simbologia e Norme Europee

Symbols and European Standards

	Resistenza allo scivolamento Slip resistance NORMATIVA TEDESCA DIN 51097 GERMAN REGULATIONS DIN 51097
DIN 51097 Norma per il transito a piedi nudi per zone bagnate soggette a calpestio a piedi nudi DIN 51097 Norm for the barefoot transit on wet areas	
	CLASSE A A - Spogliatoi; zone di accesso a piedi nudi; etc. A - Locker rooms, access areas with bare feet..
	CLASSE B (A+B) B - Docce; bordi di piscine; etc. B - Showers, poolsides..
	CLASSE C (A+B+C) C - Bordi di piscine in pendenza; scale immerse; etc. C - Poolsides sloping, immersed stairs..
Questa prova prevede che, in un dispositivo, la persona cammina a piedi nudi, sopra un piano inclinato con un angolo variabile. La superficie, ricoperta con le piastrelle sottomesse alla prova, è continuamente impregnata con un agente a base di sapone. L'angolo del piano inclinato che permette l'equilibrio della persona con sicurezza, senza scivolare, rappresenta la misura della prova. This test shows that, in a device, the person walks with bare feet, over an inclined plane with a variable angle. The surface, covered with the tiles submitted to the test, is continuously impregnated with a soap-based solution. The angle of the inclined plane that allows the balance of the person, without slipping, represents the size of the test.	

	Coefficiente di attrito dinamico (scivolosità) Dynamic coefficient of friction D-COF DINAMIC COEFFICIENT OF FRICTION > 0,42
METODO DCOF	
ANSI A137-1:2012 è una norma valida per U.S.A. che determina un coefficiente di attrito dinamico in condizioni di superficie bagnata. La superficie per essere conforme al requisito deve essere maggiore di 0.42 ANSI A137-1: 2012 is a U.S.A. norm which determines a dynamic coefficient of friction in wet surface conditions. The surface to comply with the requirements must reach a value greater than 0.42

FINITURA • FINISHING

Lappato *plus*+

La finitura **Lappato *plus*+** conferisce alla piastrella la lucentezza e la riflettenza tipici di uno specchio. Il processo produttivo è simile a quello della finitura Honed PLus. Si tratta di un procedimento meccanico in cui le mole vanno a lavorare la speciale graniglia sulla superficie della piastrella, riducendone la rugosità, fino a renderla perfettamente liscia, come uno specchio appunto, e permettendo alla stessa di brillare di luce riflessa. La piastrella con finitura lappato plus presenta una maggior definizione della grafica ed una brillantezza inusuale che la rendono adatta a tutti gli ambienti. Consigli di posa e manutenzione, pag 273-279.

Lappato o Lappato in cresta
A differenza delle finiture Lappato Plus e Lappato Honed Plus, il Gres porcellanato lappato (detto anche lappato in cresta) presenta una superficie lavorata solo parzialmente. Si tratta infatti di una lavorazione meccanica che permette di ottenere la lucidatura delle sole parti superiori della superficie, evidenziando il contrasto con la parte non lavorata. Il risultato è un prodotto con zone lucide e brillanti ed altre non lucide, tipiche della finitura naturale del prodotto stesso.
Consigli di posa e manutenzione, pag 273-279.

Naturale
Il gres porcellanato naturale, risultante dalla produzione del gres senza applicazione di ulteriori processi, si presenta con una superficie più o meno ruvida e non brillante. Risulta avere delle performance tecniche più adatte in ambienti o installazioni ad intenso traffico o in cui vengono spesso usati agenti chimici aggressivi. Le caratteristiche tecniche garantiscono risultati duraturi.
Consigli di posa e manutenzione, pag 273-279.

Lappato *plus*+

The **Lappato *plus*+** production process reaches the sheen and light reflectance of a mirror. The entire process is quite similar to the one for the Honed Plus finish. It is a mechanical process in which the grindstones smoother the special grit (graniglia) until a perfect smoothing is achieved and light can be reflected in mirror like fashion. Graphics are better defined and the unusual brightness make for an outstanding look capable to enhance all and any setting.
For tile setting and maintenance, pls see pag 273-279.

Ridge honed
Different from the "Lappato Plus" and "Lappato Honed Plus" finish, the "Lappato" (also called ridge honed) porcelain stoneware shows a surface that has only been partially smoothered. It is indeed a process that aims at polishing only the tips on the surface. The beauty is in the contrast between the smoothered and unsmoothered parts. The result is a product with matt and shiny microareas.
For tile setting and maintenance, pls see pag 273-279.

Natural
The natural finish porcelain stoneware is the product as it comes out of the kiln, without any additional treatment. The surface can have different degrees of roughness depending on the item and glaze, and always a non shiny, matt, surface. It is the most suitable product for high traffic areas or where intense and frequent cleaning is done with the use of aggressive chemical agents. The technical characteristics of this finish guarantee long lasting results.
For tile setting and maintenance, pls see pag 273-279.

note notes

I decori sono imballati misti nelle scatole ed è possibile la ripetizione di più soggetti nella stessa scatola.
Decorations are packed on a random basis and it is possible the replication of some decors into the same box.

I decori non hanno un verso di posa e non creano figure composte se accostati insieme.
The decorations do not have a laying direction and do not create composed figures when placed together.

note notes

* È OBBLIGATORIO posare il Terminale a Elle Monolitico SFALSATO essendo di dimensione diversa rispetto alle piastrelle. Trattasi di materiale coordinato quindi la tonalità è abbinabile al fondo.
* It is MANDATORY to lay Terminale a Elle Monolitico STAGGERED (not following same joint) due to the difference in dimension between tiles and special pieces. The material is coordinated, so the shade can match to the floor.

SCHEMI DI POSA LAYING PATTERNS

Si consiglia di posare il materiale sfalsato di 1/10.
We recommend laying the material in a 1/10 staggered arrangement.

Non è consigliabile posare il materiale sfalsato di 1/2.
We do not recommend laying the material in a 1/2 staggered pattern.

POSA SU ERBA • INSTALLATION ONTO GRASS

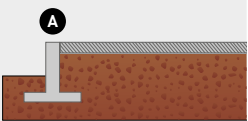

Posa diretta su erba
Direct installation on grass (Not suitable for lawn-mowers usage)

- 1 Manto erboso • Grass surface
- 2 Lastra • Slab

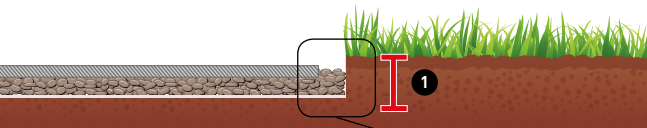

Per ottenere un effetto "tappeto":
posizionare un cordolo in cemento
per delimitare l'area da piastrellare.
Realization of "carpet effect" flooring:
a cement curb can be laid to delimit
the area in which slabs are installed.

A Cordolo in cemento • Cement curb

Posa a secco su erba
Installation on grass (Suitable for lawn-mowers usage)

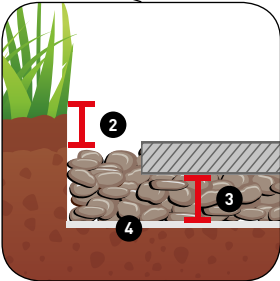

- 1 5/6 cm di profondità • 5/6 cm dragging

- 2 Lastra posizionata più in basso del manto erboso calpestabile • Slab to be laid below grass level

- 3 Letto di ghiaia di almeno 3 cm di profondità (granulometria > 4 mm)
Layer of gravel, minimum 3 cm recommended (granulometry > 4mm)

- 4 Eventuale TNT • Macro-holed, non-woven polypropylene fabric

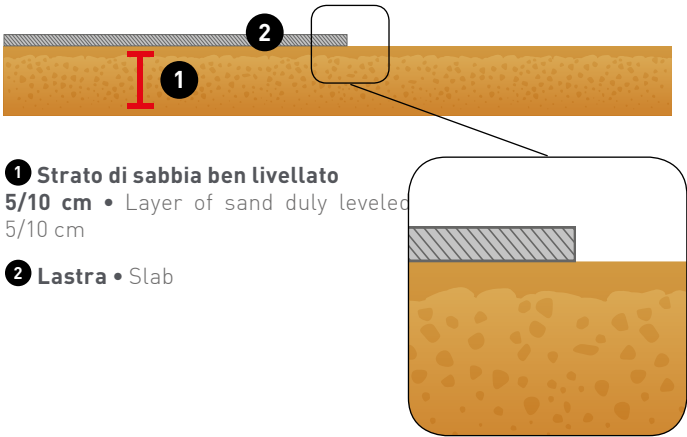

Distanza tra le lastre: posizionare le lastre distanziate tra loro in base all'effetto estetico che si vuole ottenere (camminamento "a passi", vialetto ecc).
Distance between the slabs: slabs can be install to obtain several aesthetics effects/designs (walkway, stepping stone pattern and so on).
Distance between slabs depends on the design we want to create.

Queste indicazioni rappresentano delle indicazioni generali basate sullo stato dell'arte e non vincolanti.
The following tips and suggestions are not binding for the manufacturer.

spessorati

POSA SU SABBIA • INSTALLATION ONTO SAND

1 Strato di sabbia ben livellato 5/10 cm • Layer of sand duly leveled 5/10 cm

2 Lastra • Slab

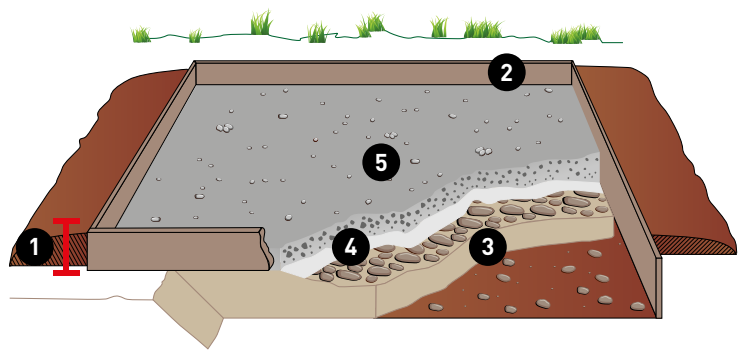

Pendenza sottofondo 2%

Creation of 2% inclination during levelling and compacting phases.

Distanza tra le lastre: posizionare le lastre distanziate tra loro in base all'effetto estetico che si vuole ottenere (camminamento "a passi", vialetto ecc). Le fughe possono essere riempite con sabbia o ghiaia.

Distance between the slabs: slabs can be install to obtain several aesthetics effects/designs (walkway, stepping stone pattern and so on). Distance between slabs depends on the design we want to create. Joints can be filled with sand or gravel.

POSA SU GHIAIA • INSTALLATION ONTO GRAVEL

1 Asportare uno strato di terreno di 10-20 cm di profondità
Drag a layer of ground (10-20 cm)

2 Cordolo in cemento o assi di legno • Cement curb or wooden plank

3 Pietrisco compatto granulometria mista (16-35 mm) per 10 cm di profondità • Crushed stone, mixed granulometry (16-35 mm), 10 cm depth

4 TNT • Macro-holed, non-woven polypropylene fabric

5 Ghiaia ben livellata granulometria 4-8 mm per 10 cm di profondità
Duly leveled gravel, granulometry between 4-8 mm, 10 cm depth

Queste indicazioni rappresentano delle indicazioni generali basate sullo stato dell'arte e non vincolanti.
The following tips and suggestions are not binding for the manufacturer.

POSA SU MASSETTO CON COLLA • LAYING ON SCREED WITH ADHESIVE

Posa su pavimento esterno non impermeabilizzato (terreno)

Installation on outdoor non waterproof floor (ground)

1 Terreno • Ground

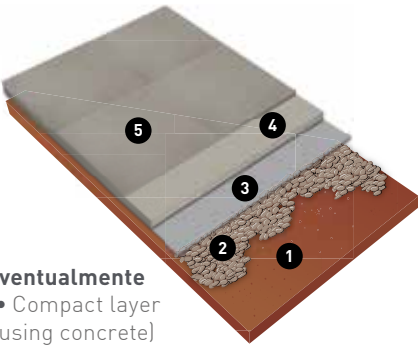

2 Strato di ghiaia compatto eventualmente stabilizzato con calcestruzzo • Compact layer of gravel (eventually stabilized using concrete)

3 Strato di livellamento in calcestruzzo avente spessore adeguato. Pendenza 1,25-2,5% • Concrete leveling layer with adequate thickness. Inclination 1,25-2,5%

4 Massetto di 8-10 cm con rete elettrosaldata posizionata a metà dello spessore dello strato • 8-10 cm screed, arc welded mesh to be positioned in the centre

5 Lastra • Slab

Posa delle lastre con un collante per esterni seguendo sempre le indicazioni specifiche del produttore dell'adesivo utilizzato e seguendo la tecnica della doppia spalmatura • Slabs must be fixed by using an adhesive suitable for outdoor use and strictly following the instructions and specifications indicated by the adhesive's manufacturer (a double adhesive layer is always recommended)

Posa su pavimento esterno impermeabilizzato

Installation on outdoor waterproof floor

1 Struttura portante (solaio) Floor

2 Strato di livellamento/pendenza Levelling/inclination layer

3 Strato di impermeabilizzazione Waterproofing layer

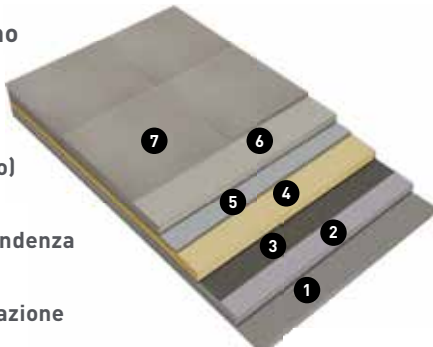

4 Strato di separazione termoisolante • Heat insulating layer

5 Strato drenante • Draining layer

6 Massetto di 8-10 cm con rete elettrosaldata posizionata a metà dello spessore dello strato • 8-10 cm screed, arc welded mesh to be positioned in the centre

7 Lastra • Slab

Posa delle lastre con un collante per esterni seguendo sempre le indicazioni specifiche del produttore dell'adesivo utilizzato e seguendo la tecnica della doppia spalmatura • Slabs must be fixed by using an adhesive suitable for outdoor use and strictly following the instructions and specifications indicated by the adhesive's manufacturer (a double adhesive layer is always recommended)

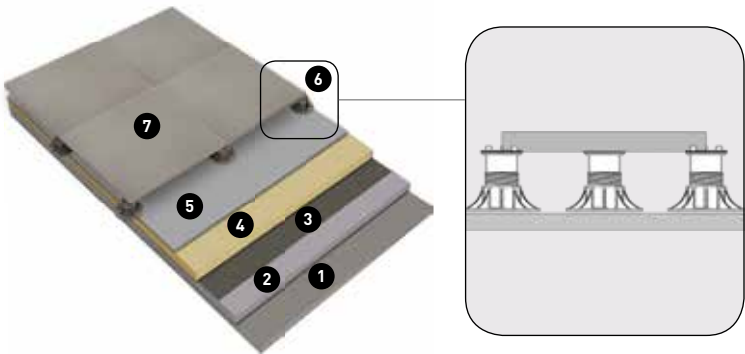

Fughe: obbligatoria la fuga a giunto aperto con ampiezza di fuga variabile maggiore di 5 mm ed utilizzo di sigillanti cementizi di classe 2. I giunti di dilatazione sono obbligatori.

Grout: using class 2 cement grouting and a minimum 5 mm grout line is mandatory. Expansion joints are mandatory too.

Queste indicazioni rappresentano delle indicazioni generali basate sullo stato dell'arte e non vincolanti.
The following tips and suggestions are not binding for the manufacturer.

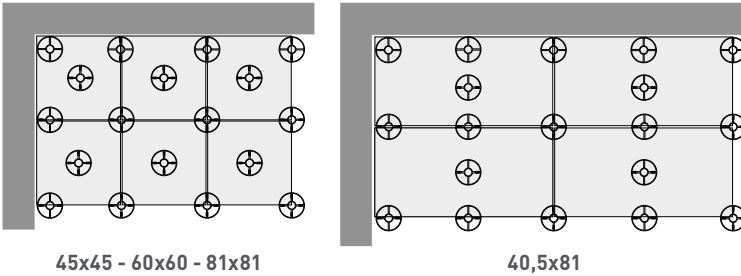

POSA SOPRAELEVATA • INSTALLATION ONTO FLAT SURFACES (RAISED LAYING)

- 1 **Terreno o struttura portante** • Ground or floor
- 2 **Massetto in pendenza** • Screed with adequate inclination
- 3 **Strato di impermeabilizzazione** • Waterproofing layer
- 4 **Strato di separazione termoisolante (foglio di polietilene)**
Heat insulating layer (polyethylene sheet)
- 5 **Opzionale: pannello termoisolante di adeguata densità**
Optional: heat insulating panel with adequate density
- 6 **Supporto da esterno in polipropilene (fisso, regolabile o autolivellante)**
Polypropylene load-bearing supports suitable for outdoor (may be fixed, adjustable or self-levelling)
- 7 **MONOLITICO spessore 17 • 20 • 30 mm**
OUTDOOR 17 • 20 • 30 mm thick slabs

Ad oggi non esiste una normativa specifica per i pavimenti sopraelevati da esterno, si rimanda pertanto al professionista progettista un'attenta valutazione dei requisiti del progetto. Sassuolo Tiles prescrive l'adizione di supporti aggiuntivi sotto le piastrelle, come da schema sotto riportato.

To date, there is no existing regulatory standard regarding outdoor raised floors. Therefore, the Customer/Designer/Project Manager has to arrange for a careful assessment of the project and its requirements. Sassuolo Tiles recommends the adoption of additional supports under the tiles, as per diagram below.

Per maggiore sicurezza e a tutela dell'utente, Sassuolo Tiles richiede di impostare un'altezza di sopraelevazione non superiore a 5 cm.

For grater safety and protection of the user, Sassuolo Tiles requires an overlay height not exceeding 5 cm.

Queste indicazioni rappresentano delle indicazioni generali basate sullo stato dell'arte e non vincolanti.
The following tips and suggestions are not binding for the manufacturer.

PAVIMENTAZIONE CARRABILE
INSTALLATION ON DRIVEWAYS

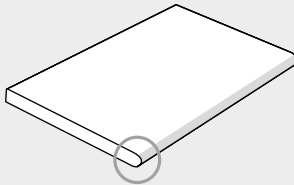

L'impiego di lastre con spessore 30 mm permette la realizzazione di pavimentazioni carrabili senza l'utilizzo di collanti per la posa.

30 mm porcelain pavers could be installed on driveways with no need of adhesives.

Queste indicazioni rappresentano delle indicazioni generali basate sullo stato dell'arte e non vincolanti.
The following tips and suggestions are not binding for the manufacturer.

CONSIGLI DI POSA, PULIZIA E MANUTENZIONE • ADVICE FOR INSTALLATION AND CLEANING
CONSEILS DE POSE, DE NETTOYAGE ET D'ENTRETIEN •
RATSCHLÄGE FÜR DIE VERLEGUNG, REINIGUNG UND WARTUNG

Consigli di posaITA

Non si accettano reclami relativi a materiale già posato.

Per una posa eseguita a regola d'arte è richiesta, in generale, l'osservanza dei seguenti criteri:

1. Resistenze adeguate del sottofondo;
 2. Rispetto dei tempi di maturazione del massetto;
 3. Posa in ambienti di sole civili abitazioni.
- Applicazioni diverse dovranno essere sottoposte a verifica di Sassuolo Tiles;
4. Rispetto degli eventuali giunti strutturali presenti;
 5. Realizzazione di giunto elastico perimetrale, per ogni elemento in elevazione, con limitazione delle superfici continue a non oltre 50-60 m (25-30 m in presenza di grandi vetrate);
 6. Utilizzo di opportuno adesivo di classe C2 (per interno) o C2E (per esterno) secondo EN 12004, utilizzando la tecnica della doppia spalmatura;
 7. Utilizzo di idoneo stucco avendo cura di effettuare prove preventive di pulibilità in caso di stuccature a contrasto;
 8. All'atto della posa prelevare piastrelle alternativamente da diverse scatole;
 9. Controllare, prima della posa, tonalità, calibro e scelta.

Il prodotto rettificato consente anche di ottenere una superficie in cui la giunzione fra una lastra e l'altra è appena percettibile (minimo 2/3 mm).
Nell'utilizzo del prodotto naturale si consiglia una fuga di 4/5 mm tra una lastra e l'altra.

Conseils de poseFRA

Aucune réclamation portant sur des matériaux déjà posés ne sera acceptée.

Pour une pose dans les règles de l'art, il convient d'une manière générale de respecter les conditions suivantes:

1. Résistance adaptée de la sous-couche;
2. Respect des temps de maturation de la chape;
3. Pose uniquement dans des habitations civiles. Toute autre application sera soumise au contrôle de Sassuolo Tiles.
4. Respect des éventuels joints structurels présents;
5. Réalisation d'un joint élastique périphérique, pour chaque élément surélevé, avec limitation des surfaces continues à un maximum de 50-60 m (25-30 m en présence de grandes baies vitrées);
6. Utilisation d'une colle adaptée de classe C2 (pour intérieur) ou C2E (pour extérieur) conformément à la norme EN 12004, en utilisant la technique du double encollage;
7. Utilisation d'un ciment-joint adapté en prenant soin de vérifier préalablement qu'il peut être nettoyé en cas de joints en contraste;
8. Lors de la pose, prélever les carreaux en alternant entre différents paquets;
9. Avant de procéder à la pose, contrôler la teinte, le calibre et l'aspect du carreau.

Le produit rectifié permet également d'obtenir une surface où la jonction entre une dalle et l'autre est à peine perceptible (2/3 mm minimum).
Lors de l'utilisation du produit avec surface naturelle, il est conseillé de respecter un joint de 4/5 mm entre chaque dalle.

Advice for intallationENG

We cannot accept complaints made after the material has been installed.

To achieve a state-of-the-art installation the following criteria must be observed:

1. Adequate sub-base resistance;
2. Respect of the slab setting times;
3. Installation in residential environments only. Any different applications must be examined by Sassuolo Tiles;
4. Respect of any existing structural joints;
5. Realization of expansion joint for the perimeter, for all raised elements, with limitation of continuous surfaces to no more than 50-60 sqm (25-30 sqm in areas containing large window/glass installations or when used externally);
6. The use of a suitable C2 (for interior use) or C2E (for external use) adhesive according to EN12004, applied with the double spread coating technique;
7. The use of a suitable grout, checked and tested first, in the case of contrasting grout, and tested in a small area to verify that it can be effectively cleaned away;
8. During laying, pick tiles alternately from different boxes;
9. Check that the calibre, shade and sorting grade are correct before installing.

Rectified products also enable to obtain surfaces where joints are hardly perceptible (minimum 2/3 mm).
For the natural finish, a joint of 4/5 mm is recommended between one slab and the next.

VERLEGEHINWEISEDE

Es werden keine Reklamationen bezüglich von bereits verlegtem Material akzeptiert.

Um nach allen Regeln der Kunst zu verlegen, müssen allgemein folgende Kriterien eingehalten werden:

1. Angemessene Widerstandsfähigkeit des Untergrunds;
2. Einhaltung der Reifungszeiten des Estrichs;
3. Verlegung in ausschließlich aus Zivilwohnungen bestehenden Umgebungen. Andere Anwendungsarten müssen von Sassuolo Tiles. überprüft werden;
4. Einhaltung eventuell vorhandener Bauwerksfugen;
5. Errichtung einer Dehnungsrandfuge für jedes erhöhte Element mit Beschränkung der durchgehenden Flächen auf maximal 50-60 m (25-30 m, falls große Glasflächen vorhanden sind);
6. Verwendung eines geeigneten Klebers der Klasse C2 (für den Innenbereich) oder C2E (für den Außenbereich) nach EN 12004 unter Anwendung der Technik des zweifachen Kleberaufstrichs;
7. Verwendung eines geeigneten Fugenmittels, wobei man im Fall von kontrastierenden Fugen zuvor Reinigungstests durchführen sollte;
8. Bei der Verlegung die Fliesen abwechselnd aus verschiedenen Schachteln verwenden;
9. Vor dem Verlegen den Farbton, die Größenklasse und die Wahl kontrollieren.

Mit dem geschliffenen Produkt kann man auch eine Fläche mit einer kaum wahrnehmbaren Fuge zwischen den einzelnen Platten erzielen (mindestens 2-3 mm). Bei Verwendung des naturbelassenen Produkts wird empfohlen, eine 4-5 mm breite Fuge zwischen den einzelnen Platten einzuhalten.

Lavaggio-protezione e manutenzione del gres porcellanato

ITA

1. Lavaggio dopo posa
Il lavaggio dopo posa è un una fase di fondamentale importanza per tutti gli interventi successivi e per la manutenzione.
Con il lavaggio acido dopo posa si eliminano i residui di posa e il normale sporco di cantiere come: malta, colla, pittura, sporco da cantiere di varia natura... È bene sapere che oltre il 90% delle contestazioni in cantiere è dovuto ad un cattivo, o addirittura inesistente, lavaggio con detergente acido dopo posa.
Per questa operazione **Fila** propone **Deterdek**, detergente disincrostante acido che non sviluppa fumi nocivi e non aggredisce le fughe. Rimuove lo sporco da cantiere - malta, stucco, incrostazioni di varia natura. **Fila Deterdek** unisce all'azione disincrostante anche una efficace azione pulente. La pulizia di fine cantiere si esegue a completa stagionatura dello stucco cementizio (almeno 36-48 ore), attenendosi scrupolosamente ai consigli di seguito riportati:
• Utilizzare Fila Deterdek diluito 1:5
(1 litro di Detredek in 5 di acqua possibilmente calda)
• Spazzare bene il pavimento quindi distribuire uniformemente la soluzione di **Detredek** diluito, utilizzando un normale spazzettone, mop-lavapavimenti (mocio) o uno straccio ruvido per ambienti residenziali oppure frizionando con monospazzola dotata di dischi con tampone di colore verde per grandi superfici;
• Lasciare agire per qualche minuto, in funzione dell'intensità dello sporco;
• Intervenire energicamente con spugna abrasiva tipo verde oppure con spazzolone con setole in nylon o nel caso di grandi superfici con monospazzola munita di disco verde e aspira liquidi.
• Raccogliere il residuo con stracci oppure con aspiraliquidi.
Resa: 1 litro/40 m² – diluizione 1:5.

Per rimuovere i residui di stucco epossidico consigliamo di utilizzare lo specifico detergente **Fila CR10**.
Prima di eseguire la pulizia con il Fila CR10 attendere i tempi di messa in esercizio del fugante utilizzato, attenendosi scrupolosamente ai consigli di seguito riportati:
• Stendere direttamente sulla superficie da pulire con una pennellessa, coprendo perfettamente tutti i residui di stucco;
• Lasciare agire per circa 30 minuti;
• Strofinare con spugna abrasiva o eventualmente spatola sui residui più consistenti. Per l'applicazione a pavimento è possibile intervenire con monospazzola utilizzando il disco più opportuno;
• Risciacquare con cura.
• Nel caso di residui più tenaci ripetere l'applicazione seguendo le stesse modalità e lasciando agire più a lungo il prodotto.

2. Protezione tipo levigato
Con la protezione si:
• Impermeabilizza la superficie, rendendola antimacchia
• Impermeabilizza le fughe, rendendole antimacchia
• Facilita la manutenzione ordinaria
La migliore protezione si realizza con **Fila MP/90**, un protettivo liquido antimacchia che penetra in profondità proteggendo il pavimento senza generare pellicole superficiali, per questo motivo **Fila MP/90** non altera il colore della superficie e la sua efficacia rimane inalterata per diversi anni.
• Stendere puro a pavimento asciutto e pulito (almeno 4 ore dopo il lavaggio), applicarlo con pennellessa, rullo o straccio avendo cura di distribuirlo in modo omogeneo su tutta la superficie comprese le fughe.
• A pavimento asciutto (dopo circa 4-8 ore) togliere la parte in eccesso che si è seccata ed è rimasta in superficie, con straccio di cotone pulito e asciutto, lucidatrice o monospazzola con disco beige. I residui tenaci si possono rimuovere utilizzando un panno pulito imbevuto di **Fila MP/90**.
Resa: 1 litro/30 m² circa.

3. Protezione tipo lappato
Con la protezione si:
• Impermeabilizza la superficie, rendendola antisporco
• Ridona lucentezza superficiale
• Facilita la manutenzione ordinaria
La migliore protezione si realizza con **Fila PD15**, un protettivo liquido antisporco che penetra in profondità proteggendo il pavimento senza generare pellicole superficiali, per questo motivo **Fila PD15** non altera il colore della superficie e la sua efficacia rimane inalterata nel tempo e resiste agli agenti chimici.
• Stendere il prodotto puro a pavimento perfettamente asciutto e pulito (almeno 4-8 ore dopo il lavaggio), applicarlo con pennellessa o straccio avendo cura di distribuirlo in modo omogeneo su tutta la superficie comprese le fughe.
• Massaggiare accuratamente il prodotto in fase di stesura in modo da farlo penetrare bene e di eliminare completamente i residui di prodotto dalla superficie.
• Entro 10 minuti dall'applicazione di **Fila PD15** bisogna togliere la parte in eccesso che si eventualmente è rimasta in superficie, con straccio di cotone pulito e asciutto o della semplice carta tipo scottex.
Resa: 1 litro/70 m² circa.

4. Protezione tipo naturale-strutturato
Nel caso di superfici rustiche lo sporco si deposita negli interstizi del materiale, rendendo difficile la manutenzione.
In questo caso, per pavimentazioni interne ed esterne si consiglia di utilizzare **Fila STOP DIRT** che protegge il pavimento dallo sporco rendendo più facile la manutenzione ordinaria. Il protettivo **Fila STOP DIRT** protegge il pavimento senza creare pellicole superficiali, non altera il colore della superficie e non modifica l'originale grado di scivolosità (prove eseguite secondo i metodi B.C.R.A. e ASTM C 1028-2007).
• Stendere il prodotto puro a pavimento perfettamente asciutto e pulito (almeno 4-8 ore dopo il lavaggio), applicarlo con pennellessa o straccio avendo cura di distribuirlo in modo omogeneo su tutta la superficie comprese le fughe.
• Massaggiare accuratamente il prodotto in fase di stesura in modo da farlo penetrare bene e di eliminare completamente i residui di prodotto dalla superficie.
• Entro 10 minuti dall'applicazione di **Fila STOP DIRT** bisogna togliere la parte in eccesso che si eventualmente è rimasta in superficie, con straccio di cotone pulito e asciutto o della semplice carta tipo scottex.

5. Manutenzione per tutte le superfici
Per la pulizia di tutti i giorni
FilaCleaner detergente neutro a basso residuo.
Si diluisce a seconda dello sporco. Ad elevate diluizioni non necessita di risciacquo. Non lascia, sulla superficie lavata, residui cerosi o siliconici in quanto ne è privo.
Si può usare anche con macchine lavasciuga.
Resa: 2.000 m² con 1 litro - diluizione 1:200.

Per sporchi più intensi e per togliere le macchie
Fila PS/87 detergente sgrassante e smacchiatore.
Un prodotto, tante funzioni: detergente, sgrassante, decerante e smacchiatore.
Basta scegliere la diluizione giusta per ottenere l'effetto desiderato.
• Diluito 1:10 in acqua, per rimuovere sporchi intensi
• Puro, lasciandolo agire per circa 20-40 minuti per rimuovere le macchie e residui di stucco epossidico.

Washing-protection and maintenance of porcelain tiles

ENG

1. Washing after laying
Washing after laying is a fundamentally important stage for any subsequent treatment and for maintenance.
Acid washing after laying removes laying residues and normal building site dirt, such as: grout, glue, paint, different kinds of building site dirt
It is a good thing to know that over 90% of site complaints are due to poor, or even inexistent, washing with acid detergent after laying.
For this operation, Fila suggests **Deterdek**, the acid-based descaling detergent that does not emit harmful fumes and does not harm the grouting. It removes building-site dirt - grout, plaster, different kinds of encrusted dirt.
Fila Deterdek combines descaling with effective cleaning.
The site must be cleaned on completion, when the concrete grouting is completely dry (at least 36-48 hours), closely following the instructions given below:
• Use **Fila Deterdek** diluted 1:5 (1 litre of Deterdek in 5 of water, preferably hot)
• Brush the floor thoroughly, then evenly apply the solution of diluted **Deterdek** using a normal flat brush, floor mop or a rough household floor cloth or rubbing with a single-brush machine, fitted with discs with green buffer for large surfaces;
• Leave for a few minutes, depending on how dirty the surface is;
• Rub hard with a green abrasive sponge or flat brush with nylon bristles or, for large areas, a single-brush machine fitted with green disc and liquid vacuum cleaner;
• Remove residues with cloths or a liquid vacuum cleaner.
Coverage: 1 litre/40 m² – dilution 1:5

To remove residues of epoxy grouting we recommend using the specific **Fila CR10** detergent.
Before cleaning with **Fila CR10** wait until the grouting product applied is ready for use, closely following the instructions given below:
• Apply directly to the surface to be cleaned using a large flat paintbrush, perfectly covering all residues of plaster.
• Leave for about 30 minutes
• Rub with an abrasives sponge or even a spatula to remove larger residues. A single-brush machine fitted with the most appropriate disc can be used for floors
• Rinse thoroughly
• For more stubborn residues, repeat the same procedure, leaving the product to work for longer.

2. Polished protection
Protection:
• Waterproofs the surface, making it stain proof
• Waterproofs grouting, making it stain proof
• Makes ordinary maintenance easier
The best protection is offered by **Fila MP/90**, a stain-proofing liquid protector that penetrates deep down. **Fila MP/90** protects the floor without forming a surface film and therefore does not alter the surface colour and its effectiveness remains unaltered for several years.
• On a clean dry floor and at least 4 hours after washing, apply undiluted with a flat paintbrush, roller or cloth, taking care to spread evenly over the entire surface, including the grouting.
• When dry (after about 4-8 hours), remove any dried excess from the surface with a clean dry cotton cloth, machine polisher or single-brush machine with beige disc. Stubborn residues can be removed with a clean cloth soaked in **Fila MP/90**.
Coverage: 1 litre/30 m² approx.

3. Lappato protection
Protection:
• Waterproofs the surface, making it dirt proof
• Restores surface sheen
• Makes ordinary maintenance easier
The best protection is offered by **Fila PD15**, a dirt-proofing liquid protector that penetrates deep down. **Fila PD15** protects the floor without forming a surface film and therefore does not alter the surface colour and its effectiveness remains unaltered over time and resists chemical agents.
• On a perfectly clean dry floor and at least 4-8 hours after washing, apply undiluted with a flat paintbrush or cloth, taking care to spread evenly over the entire surface, including the grouting.
• Rub thoroughly when applying to make the product penetrate well and completely remove product residues from the surface.
• 10 minutes after applying, any excess residues of **Fila PD15** must be removed from the surface, with a clean dry cotton cloth or simple kitchen roll.
Coverage: 1 litre/70 m² approx.

4. Natural-textured protection
Dirt gets stuck in the uneven surface of rough-finish floors, making maintenance difficult.
In this case, we recommend using **Fila STOP DIRT** for indoor and outdoor floors and paving. It protects the surface from dirt and makes everyday cleaning easier.
Fila STOP DIRT protects the floor or paving without forming a surface film and does not alter the surface colour or the original skid resistance of the material (tests carried out using B.C.R.A. and ASTM C 1028-2007 methods).
• On a perfectly clean dry floor and at least 4-8 hours after washing, apply undiluted with a flat paintbrush or cloth, taking care to spread evenly over the entire surface, including the grouting.
• Rub thoroughly when applying to make the product penetrate well and completely remove product residues from the surface.
• 10 minutes after applying, any excess residues of **Fila STOP DIRT** must be removed from the surface, with a clean dry cotton cloth or simple kitchen roll.

5. Maintenance for all surfaces
For everyday cleaning
FilaCleaner low-residue neutral detergent.
Dilute depending on the dirt. When highly diluted it does not need rinsing.
It does not leave waxy or silicon residues on the washed surface as it does not contain them.
It can also be used with washing and drying machines.
Coverage: 2,000 m² with 1 litre – dilution 1:200

For more intense dirt and for removing stains
Fila PS/87 degreasing detergent and stain remover.
One product, lots of uses: detergent, degreaser, wax remover and stain remover.
Just choose the right dilution to give the desired effect.
• Diluted 1:10 in water to remove intense dirt
• Undiluted, left to work for around 20-40 minutes to remove stains and residues of epoxy grouting.

CONSIGLI PER LA PULIZIA DOPO POSA E MANUTENZIONE

dei pavimenti in gres porcellanato **naturali** e **lappati**.

All’attenzione del posatore: prima pulizia

La cura con la quale si esegue la pulizia dopo posa influenzerà la pulibilità del pavimento per tutta la sua durata.

Importantissimo è pulire bene a fine posa, a pavimento nuovo. È necessario infatti, dopo aver applicato il fugante, togliere tutti i residui di cemento lasciati in fase di posa e stuccatura dai posatori con l'utilizzo di acido tamponato (tipo Keranet o similari). Lasciare agire per circa 40 minuti e poi risciacquare bene con appositi strumenti aspira liquidi fino a vedere l'acqua utilizzata limpida. A seguire effettuare un lavaggio con un prodotto sgrassante leggermente alcalino (tipo sgrassatore per cappe da cucina o tipo Chante Clair) ed un buon risciacquo. Dopo queste operazioni la messa in servizio del pavimento è terminata a regola d'arte.

ATTENZIONE: Si consiglia di utilizzare fuganti non addittivati con polimeri. In caso di utilizzo di questa tipologia si prega di pulire immediatamente con un detergente alcalino.

Se queste operazioni non vengono effettuate correttamente il pavimento conserverà un invisibile strato di calcare che col tempo si potrà macchiare o impedire una pulizia profonda.

Fatto questo e avuta la certezza che le piastrelle siano ben pulite, il pavimento non presenterà problemi. Se però la pulizia iniziale non è stata eseguita correttamente ed il pavimento presenta aloni, macchie o piastrelle con superficie opacizzata è possibile rimediare ripartendo dalla prima pulizia, cioè utilizzando un detergente a base acida e risciacquando ripetutamente con acqua pulita, in quanto non esistono detergenti in grado di pulire all'istante e al solo passaggio un pavimento così sporco.

Manutenzione e pulizia ordinaria

Si consiglia l'utilizzo di acqua e aceto una volta al mese per asportare il calcare che inevitabilmente si deposita sul pavimento durante le normali operazioni di pulizia.

Per la pulizia quotidiana è sufficiente utilizzare, con moderazione, un detergente neutro a basso residuo, prodotti acquistabili nei supermercati. È importante sciacquare spesso il panno utilizzato nella pulizia e non eccedere nella quantità di detergente, infatti l'uso di acqua sporca, prodotti auto lucidanti o eccesso di detergenti può formare, col tempo, una patina invisibile causata da aloni e macchie.

Di norma, i produttori consigliano di provare i loro detergenti su una piccola porzione nascosta del pavimento o del rivestimento prima di utilizzarli su tutta la superficie da trattare.

Nel caso di uso accidentale o volontario di prodotti chimici (detergenti, acidi o solventi), seguire attentamente le istruzioni d'uso previste per ogni prodotto, in particolare si suggerisce di effettuare una prova su una piccola porzione nascosta della superfice da trattare e comunque deve sempre seguire un abbondante risciacquo e accurata asciugatura.

ATTENZIONE: di fondamentale importanza è non utilizzare mai smacchiatori tipo antiruggine o di tipo spray perché contengono acido fluoridrico, il danno che provocherà sarà irreversibile ed irreparabile in quanto non esiste pavimento resistente a tale acido.

ADVICE FOR CLEANING AFTER INSTALLATION AND FOR MAINTENANCE

of **natural** and **lapped** porcelain stoneware floor tiles

For installers: initial cleaning

Careful, scrupulous cleaning of new floors after installation will make them easier to clean for the rest of the time thereafter, so it is extremely important.

After the grout has been applied, all the cement residue left behind at the installation and grouting stage must be removed using buffered acid (such as Keranet or similar).

Leave the acid to work for about 40 minutes, then rinse thoroughly using suitable wet vacuum devices until the water runs clear.

After this, wash using a slightly alkaline degreasing product (such as the type used for kitchen hoods, Chante Clair or similar) and rinse carefully. The flooring is now perfectly ready for use.

N.B.: We recommend using grout without polymer additives. If this type of grout is used, cleaning must be carried out immediately using an alkaline detergent.

If these operations are not carried out correctly, the floor will retain an invisible layer of limescale which in time may become soiled or prevent proper cleaning.

Once this has been done and you are sure the tiles have been properly cleaned, there will be no problems with the floor. If, however, this initial cleaning has not been carried out properly and there are shades or stains on the floor, or tiles with a dull surface, the problem can be solved by starting out from the initial cleaning process, i.e. using an acid-based detergent and rinsing repeatedly with clean water, because no detergent is able to clean such a dirty floor in just one go.

Ordinary cleaning and maintenance

Water and vinegar should be used once a month to remove the limescale that inevitably settles on the floor during normal cleaning operations.

For everyday cleaning, it is sufficient to use a moderate amount of neutral, low-residue detergent, which can be purchased in supermarkets.

It is important to rinse the cloth used for cleaning frequently, and not to use too much detergent; in time, dirty water, self-polishing products or too much detergent can leave an invisible patina to form that causes shades and stains. Manufacturers generally recommend testing their detergents on a small section of floor or wall hidden from view before using it on the whole surface to be treated. If chemicals (detergents, acids or solvents) are used either accidentally or voluntarily, carefully follow the instructions provided for the product in question.

We suggest trying products out on a small section hidden from view of the surface to be treated, and in all cases the surface must be thoroughly rinsed and dried.

N.B.: spray stain removers or rust removers must never be used, because they contain hydrofluoric acid, which causes irreversible, irreparable damage to all kinds of flooring.

CONSEILS DE NETTOYAGE APRÈS LA POSE ET D'ENTRETIEN

des revêtements de sol en grès cérame **naturels** et **polis**

À l'attention de la personne en charge de la pose: premier nettoyage

Le soin apporté au nettoyage une fois la pose achevée a une incidence sur la nettoyabilité du revêtement de sol pendant toute sa durée d'utilisation. Il est fondamental de procéder à un nettoyage correct du nouveau revêtement de sol une fois la pose achevée. Après le remplissage des joints, éliminer tous les résidus de ciment laissés lors de la pose et du remplissage des joints par les personnes en charge de la pose en utilisant de l'acide tamponné (type Keranet ou produit similaire). Laisser agir pendant environ 40 minutes puis rincer avec soin à l'aide d'outils adaptés d'aspiration de liquide, jusqu'à ce que l'eau utilisée soit limpide. Procéder ensuite à un nettoyage avec un produit dégraissant légèrement alcalin (comme un dégraissant pour hottes de cuisine ou un produit de type Chante Clair) et rincer convenablement. Une fois ces opérations réalisées, la mise en service du revêtement de sol est considérée comme achevée dans les règles de l'art.

ATTENTION: il est recommandé d'utiliser des produits de jointoiment sans additifs polymères. En cas d'utilisation de ce type de produits, nettoyer immédiatement avec un produit de nettoyage alcalin.

Si ces opérations ne sont pas réalisées correctement, une couche de calcaire invisible demeurera sur le revêtement de sol qui, avec le temps, pourrait se tacher ou empêcher un nettoyage en profondeur. Une fois ces opérations réalisées et lorsque l'on a la certitude que les carreaux sont bien propres, le revêtement de sol ne présente plus aucun problème. Cependant, si le nettoyage initial n'a pas été réalisé correctement et si le revêtement de sol présente des auréoles, des taches ou des carreaux dont la surface est opaque, il est possible d'y remédier en recommençant un nettoyage initial. Utiliser alors un produit de nettoyage à base acide puis rincer de manière répétée à l'eau propre, dans la mesure où il n'existe pas de produits capables de nettoyer instantanément et en un seul passage un revêtement de sol présentant un tel degré de saleté.

Entretien et nettoyage ordinaire

Il est conseillé d'utiliser de l'eau et du vinaigre une fois par mois pour éliminer le calcaire qui se dépose inévitablement sur le revêtement de sol lors des opérations de nettoyage normales. Pour le nettoyage quotidien, il suffit d'utiliser, avec modération, un produit de nettoyage neutre à faible résidu, vendu couramment dans le commerce. Il est important de rincer régulièrement le linge utilisé pour le nettoyage et de ne pas utiliser une quantité excessive de produit de nettoyage. L'utilisation d'eau sale, de produits autolustrants ou d'une quantité excessive de produit nettoyant peut avec le temps entraîner la formation d'une patine invisible et l'apparition d'auréoles et de taches.

Généralement, les fabricants recommandent d'essayer leurs produits de nettoyage sur une petite portion cachée du revêtement avant de les utiliser sur l'ensemble de la surface à nettoyer. En cas d'utilisation accidentelle ou volontaire de produits chimiques (produits de nettoyage, acides ou solvants), suivre attentivement les instructions d'utilisation de chaque produit, en particulier s'il est recommandé d'effectuer un essai sur une petite portion cachée de la surface à traiter, et toujours procéder à un rinçage abondant et à un séchage méticuleux.

ATTENTION: il est fondamental de ne jamais utiliser de détachants antirouille ou en spray, qui contiennent de l'acide fluorhydrique. Les dégâts causés seraient irréversibles et irréparables dans la mesure où il n'existe aucun revêtement de sol résistant à cet acide.

RATSCHLÄGE FÜR DIE REINIGUNG NACH DEM VERLEGEN UND DIE WARTUNG von **naturbelassenen** und **geläpften** Feinsteinzeugböden von

Für den Verleger: erste Reinigung

Die Sorgfalt, mit der man die Reinigung nach dem Verlegen durchführt, wird die Reinigungsfähigkeit des Fußbodens während seiner gesamten Lebensdauer beeinflussen. Es ist sehr wichtig, den neuen Bodenbelag nach der Verlegung gut zu reinigen. So ist es notwendig, nach dem Auftragen der Fugenmasse alle beim Verlegen und Verfugen hinterlassenen Zementrückstände mit einer gepufferten Säure (der Art Keranet oder ähnlichem) zu entfernen.

Ungefähr 40 Minuten lang einwirken lassen und dann gut mit geeigneter Ausrüstung zur Ansaugung von Flüssigkeiten spülen, bis das verwendete Wasser klar bleibt. Danach eine Reinigung mit einem leicht alkalischen Entfetter (der Art der Entfetter für Abzughauben oder z.B. Chante Clair) ausführen und gut spülen.

Nach diesen Vorgängen ist der Fußboden nach allen Regeln der Kunst für eine Inbetriebnahme bereit.

ACHTUNG: Es wird empfohlen, Fugenmittel ohne Polymerzusätze zu verwenden. Bei Verwendung dieser Typologie wird empfohlen, sofort mit einem alkalischen Reinigungsmittel nachzureinigen.

Falls diese Vorgänge nicht korrekt durchgeführt werden, wird eine unsichtbare Kalkschicht auf dem Fußboden verbleiben, die mit der Zeit Flecken erzeugen oder eine tiefgehende Reinigung verhindern könnte. Nach diesen Maßnahmen und nachdem man sich vergewissert hat, dass die Fliesen gut gereinigt sind, wird der Fußboden keine Probleme aufweisen. Falls die Erstreinigung dagegen nicht korrekt ausgeführt wird und der Fußboden Schlieren, Flecken und Fliesen mit matter Oberfläche aufweist, kann man Abhilfe schaffen, indem man die Erstreinigung unter Verwendung eines Reinigungsmittels auf Säurebasis wiederholt und mehrmals mit sauberem Wasser nachspült, da es keine Reiniger mit sofortiger Wirkung gibt, die einen auf diese Weise verunreinigten Fußboden in einem Durchgang reinigen.

Normale Wartung und Reinigunge

Es wird empfohlen, einmal im Monat Wasser mit Essig zu verwenden, um den Kalk zu entfernen, der sich unvermeidlich bei der normalen Reinigung auf dem Fußboden abgelagert. Für die tägliche Reinigung ist es ausreichend, mit Maßen einen in Supermärkten erhältlichen Neutralreiniger mit geringem Rückstand zu verwenden. Es ist wichtig, das bei der Reinigung verwendete Tuch häufig auszuspülen und nicht mit der Reinigermenge zu übertreiben, da die Verwendung von schmutzigem Wasser, Reinigern mit Selbstglanzeffekt oder zu viel Reinigungsmittel mit der Zeit eine unsichtbare Patina bilden kann, die Schlieren und Flecken erzeugt. Normalerweise empfehlen die Hersteller, die Reiniger auf einer kleinen, verborgenen Stelle des Fußbodens oder der Verkleidung zu testen, bevor man sie auf der gesamten zu behandelnden Fläche einsetzt. Im Fall einer unabsichtlichen oder gewollten Verwendung von chemischen Produkten (Reiniger, Säuren oder Lösungsmittel), die Gebrauchsanweisungen für das jeweilige Produkt aufmerksam befolgen, insbesondere wird empfohlen, einen Test auf einer kleinen verborgenen Stelle der zu behandelnden Fläche auszuführen und in jedem Fall reichlich abzuspülen und sorgfältig zu trocknen.

ACHTUNG: Es ist von grundlegender Bedeutung, niemals Fleckenentferner der Art Rostschutzmittel oder Sprays zu verwenden, da sie Fluorwasserstoffsäure enthalten, die irreversible Schäden verursachen, da es keinen Fußboden gibt, der dieser Säure widersteht.

ANDAL
SYSTEM SRL

S.A.P. Distanziatore Livellante

La Soluzione per una Posa Perfetta

Gentile cliente/posatore,
le aziende ceramiche hanno immesso sul mercato
pavimenti e rivestimenti di grandi formati rettificati che
necessitano di una posa più specifica e accurata.

Il **distanziatore livellante S.A.P.** è nato per migliorare
la messa in opera delle piastrelle e semplificare il
lavoro del posatore ottenendo così un prodotto finito
esteticamente perfetto.

Per questo motivo, **Sassuolo Tiles** consiglia di posare
con il **distanziatore livellante S.A.P.** per prevenire gli
inconvenienti che possono presentarsi durante la posa.

In particolare, il **distanziatore livellante S.A.P. :**

- Allinea piastrelle di diverso spessore
- Elimina il dislivello tra le piastrelle
- Assicura una fuga minima di 1 mm
- Non necessita di alcuno strumento aggiuntivo
- Diminuisce le contestazioni
- Risultati professionali

Per maggiori informazioni, visita il sito www.andalsystem.it
oppure contatta i nostri tecnici **0962 431436 - info@andalsystem.it**

S.A.P.3

S.A.P.4

PRIMA

DOPO

1

Posizionare due o più tiranti al di sotto
della piastrella a circa 10 cm dagli angoli.
Posizionare la piastrella successiva.

2

Far scivolare il cono all'interno del
tirante, spingendo con forza fino
all'allineamento delle piastrelle.

3

Una volta indurito il collante sarà
sufficiente un calcio in linea di fuga
sul tirante per eliminarlo.

FOR THE ATTENTION OF THE INSTALLER

S.A.P. LEVELING SPACERS: THE BEST SOLUTION FOR A PERFECT TILE INSTALLATION

Dear customer/installer,
large-format rectified porcelain produced by ceramic factories needs a more precise and accurate tile installation.

The **SAP leveling spacer** is designed to improve tile installation and oversimplify the work of the installer and achieve an excellent result. For all these reasons, **Sassuolo Tiles** recommends to install tiles with the **SAP leveling spacer** in order to prevent inconveniences which may occur during tile installation.

In particular, the **SAP leveling spacer**:

- Aligns tiles of different thicknesses,
- Virtually eliminates lippage,
- Allows a minimum joint of 1 mm
- No special tools are required
- Decreases call-backs due to poor installation
- Professional results

FÜR FLIESENLEGER

SYSTEM S.A.P. ZUM NIVELLIEREN VON FLIESEN BEI DER VERLEGUNG

Sassuolo Tiles empfiehlt Andalsystem:

Mit diesem **SAP System** ist es möglich Fliesen absolut Plan zu verlegen. Überzähne werden zuverlässig vermieden.

Die Anwendung ist einfach und schnell.

Man spart Zeit und erhält einen perfekt verlegten Boden, bei geringem Kostenaufwand.

Besonders vorteilhaft erweist sich bei großformatigen und kalibrierten Fliesen.

Die Zuglaschen (Weiß) werden bei der Verlegung in die Fugen (1 mm) eingesetzt.

Nach Einlegen der benachbarten Fliese drückt man den Keil (Gelb)

mit der Spezialzange durch die Lasche,

bis die Oberfläche beider Fliesen auf gleicher Ebene ist.

Nach dem Erhärten des Klebers wird die Lasche an der Sollbruchstelle einfach abgebrochen.

Der Keile kann wiederverwendet werden.

Das System ist nach dem Ausfügen nicht mehr erkennbar.

A LA ATENCIÓN DEL ALICATADOR

SEPARADORES DE NIVELACIÓN S.A.P. : LA MEJOR SOLUCIÓN PARA UNA PERFECTA COLOCACIÓN

Estimado cliente/alicatador,

las empresas de cerámicos han introducido en el mercado pavimentos y revestimientos de gran formato rectificado que necesitan una colocación más precisa.

El **separador de nivelación S.A.P.** es un producto diseñado para mejorar la colocación de las baldosas y simplificar el trabajo del alicatador, así que logre un resultado excelente.

Por este motivo, **Sass Tiles** recomienda colocar con el **separador de nivelación S.A.P.** para prevenir los inconvenientes que pueden verificarse durante la colocación.

En particular, el **separador de nivelación S.A.P. :**

- Nivelas baldosas de diferente espesor;
- Elimina el desnivel entre las baldosas;
- Permite una junta mínima de 1 mm;
- No necesita alguna herramienta adicional;
- Disminuye las contestaciones debidas a una incorrecta colocación;
- Resultados profesionales.

Para mayor informaciones, por favor visite nuestro sitio web www.andalsystem.it o contacte nuestros especialistas al número **0039 (0)962 431436 - info@andalsystem.it**

À L'ATTENTION DE L'INSTALLATEUR

CROISILLONS AUTONIVELANTS S.A.P. : LA MEILLEURE SOLUTION POUR POSER VOTRE CARRELAGE

Cher client/installateur,

Les sociétés de carreaux ont réalisé carreaux de grand format rectifié que exigent de une pose plus précise.

Le **croisillon autonivelant S.A.P.** est développé pour améliorer la pose des carreaux et simplifier le travail de l'installateur, obtenant un résultat excellent.

Pour toutes ces raisons, **Sass Tiles** préconise le **croisillon autonivelant S.A.P.** afin de prévenir problèmes que peuvent se produire pendant la pose des carreaux.

En particulier, le **croisillon autonivelant S.A.P. :**

- Est idéal pour une utilisation avec des carreaux de différentes épaisseurs;
- Permet d'éliminer tout décalage de niveau entre les carreaux;
- Permet un largeur minimale du joint de 1 mm entre les carreaux;
- Ne nécessite aucun outil particulier;
- Diminue rappels dus à une mauvaise installation;
- Résultats professionnels.
